

Project Manager / Technical Designer – Fabrication & Delivery Brighton - UK

Full-time | Brighton (with UK and occasional overseas travel)

Millimetre designs and makes large-scale artworks, architectural structures, and bespoke installations. We work where ideas meet material — shaping original work with care, precision, and intent.

We're seeking an exceptional individual whose strengths sit in **project delivery**, **technical drafting for fabrication**, or a considered combination of both.

This is not a narrowly defined role. It's an opportunity for someone who understands how complex work is shaped — through material knowledge, process-led thinking, and clear decision-making — and who is ready to take meaningful responsibility for delivery.

About the role

You'll play a central role in developing and delivering multi-material projects. Depending on where your strengths lie, you may lead projects end-to-end, take primary responsibility for technical design and drawing, or work fluidly across both.

You'll work closely with Project Directors, Production Managers, and workshop teams — contributing directly to how projects are resolved, made, and installed.

What you'll do

- Lead or support projects from first enquiry through to installation.
- Produce or oversee clear, buildable 2D and 3D drawings.
- Work through materials, detailing, and fabrication strategy.
- Coordinate with clients, architects, artists, suppliers, and subcontractors.
- Support procurement, scheduling, and site coordination — from contracts through to logistics.
- Solve problems thoughtfully, with material, process, and intent aligned.
- Ensure quality and precision from first detail to final install.

What you'll bring

- Strength in project delivery and/or technical drafting for fabrication.
- A solid understanding of making — how things are built, assembled, and installed.
- Confidence working with material, detail, and process.
- Clear, measured communication and a collaborative approach.
- A strong grasp of the project delivery lifecycle.
- Care for how things are made — and why.

Why join us

You'll work on projects that demand invention, precision, and responsibility. You'll be trusted to shape work that matters — alongside people who value clarity, craft, and shared effort.

To apply

Please send a CV and a short note outlining your experience and where your strengths sit. Drawing samples or a portfolio are welcome.
